

kopi satset.

6000

10 detik

Iced coffee from Rp6,000, poured in ten seconds from electric carts in Surabaya.

Initial funding round. Pre-launch plan.

Kopi Satset launches with ten carts and one kitchen

10

electric carts, each fitted
with a GPS tracker

1

central kitchen making cold
brew for the whole fleet

6000

rupiah for the entry cup

200

Rp million initial round,
in equity

Cold brew is made in one kitchen, carried in sealed jugs and poured over ice at the kerb in Surabaya.

Street coffee here sells at about Rp12,000

12,000

rupiah for a typical cup from a coffee cart in the city

6,000

rupiah for the Kopi Satset entry cup

Seen in the field, August 2026

Carts selling at about Rp12,000 move 40 to 60 cups a day at busy roadside spots.

Fleets with employed sellers already work these streets, so buyers know the format.

The bet

At half the price, iced coffee becomes a daily purchase for factory workers, students and commuters.

We sell two drinks, from Rp6,000

es kopi

6000

every cup, all day

Iced black coffee.

kopi susu manis

6000

first ten cups per cart, each day

Sweet iced milk coffee.

8000

every cup after that

Cold brew, made the day before in one kitchen.

Poured over ice in about ten seconds.

Paid in cash or by QRIS.

kopi satset.

Coffee is brewed once and poured at the kerb

Nothing is brewed on the cart. Serving is a pour, so a queue is never waiting on a machine.

One kitchen supplies the whole fleet and is planned for up to 1,200 cups a day.

A cart carries little fixed cost

No shop lease

The cart is the shop, so there is no shop to rent or fit out.

Moves in a day

A weak site costs a relocation. The cart and its seller carry on somewhere else.

Cash at the pour

Every sale is settled on the spot, so there are no receivables to fund.

One kitchen, many carts

A new cart adds a selling point without a second kitchen, up to the kitchen's capacity.

Carts go where people pass at set hours

Site type	Expected busy hours	Pattern
Factory gate	06:00–08:00 and 15:00–17:00	Two sharp peaks, quiet at midday
Market	05:00–09:00	Over by mid-morning
Commuter road	06:00–09:00	Morning traffic, short stops
Campus	11:00–14:00	Lunch peak, pauses in term breaks
Office frontage	07:00–09:00 and 12:00–13:00	Arrival and lunch, near established outlets

The first wave also tests hospitals, schools, clinics, fuel stations and evening retail. One cart can work two or three sites in a day, such as a factory gate at shift start and again at shift end.

Each cart reports where it is and what it sells

The asset being built is a map of pavements with known hourly demand.

The first fourteen days replace the model with data

Days 1 and 2 are left out of every reading as novelty.

New carts are modelled at 60% of mature volume in their first month and 85% in their second.

The number that decides the result

Cups per cart, per day.

Every figure on the slides that follow is a model output keyed to this number. The trading record replaces the model as it comes in.

Each cup leaves Rp3,300 to Rp4,800 before overheads

Rupiah per cup	Rp6,000 cup	Rp8,000 cup
Selling price	6,000	8,000
Cost of goods	(2,000)	(2,200)
Seller commission	(700)	(1,000)
Contribution before wastage	3,300	4,800
Gross margin	66.7%	72.5%

Where the price goes

Rp6,000 cup

Rp8,000 cup

■ Cost of goods ■ Commission ■ Contribution

Contribution is stated before wastage, bonus, kitchen labour, replenishment, depreciation and tax. Blended contribution rises from Rp3,900 a cup at 25 cups a day to Rp4,479 at 70.

Of each Rp8,000 sold, Rp2,931 is net profit

Plan model, August 2026. Ten carts at 70 cups per cart per day, in rupiah per Rp8,000 of revenue.

■ Variable costs

3,583

44.8% of revenue

Ingredients and packaging 2,280

Commission 989

Wastage 314

■ Stepped costs

883

11.0% of revenue

Performance bonus 581

Kitchen labour 302

■ Fixed, depreciation, tax

604

7.6% of revenue

Replenishment and charging 196

Depreciation 342

Telemetry 26, tax 40

■ Net profit

2,931

36.6% of revenue

After every cost in the model

Ten carts earn Rp57.1m of EBITDA a month at 70 cups

Plan model, August 2026. One month of 26 trading days, in Rp million. EBITDA margin 41.4%, net margin 36.6%.

Volume per cart sets what the fleet earns

Monthly EBITDA, ten carts, Rp million

Cups per cart per day. The two plan cases, 50 and 70, are shown in black.

Plan model, August 2026. Ten carts, one month of 26 trading days.

Cups	Revenue	EBITDA	Margin
30	Rp54.6m	Rp17.9m	32.7%
50	Rp96.2m	Rp37.2m	38.6%
70	Rp137.8m	Rp57.1m	41.4%
100	Rp200.2m	Rp85.6m	42.7%

Break-even is 6.9 cups per cart per day on EBITDA and 13.1 after depreciation.

Seller pay rises with every band of cups sold

Seller pay a month, Rp million

12%

of revenue goes to commission at every volume: Rp700 on the entry cup, Rp1,000 on the main cup

18–20%

of revenue is total seller cost from 50 cups a day, once the monthly bonus is in payment

The plan pays investors first, then grows the fleet

Carts trading, by month

Plan model, August 2026. Investors receive the first Rp100m of operating cash. After that all cash goes into carts, up to ten new carts a month.

Month 12	50 cups	70 cups
Carts trading	44	78
Revenue a month	Rp385m	Rp995m
EBITDA a month	Rp129m	Rp384m
Investors paid Rp100m	Month 3	Month 2

Monthly EBITDA climbs as carts are added

EBITDA by month, Rp million

Plan model, August 2026. New carts trade at 60% of mature volume in their first month and 85% in their second.

Year one	50 cups	70 cups
Revenue	Rp2.18bn	Rp5.04bn
EBITDA	Rp0.76bn	Rp1.95bn
EBITDA in month 12	Rp129m	Rp384m
Cash at month 12	Rp6m	Rp519m

An added cart pays back in under three months

307%

return on capital employed:
annualised EBIT of Rp614m
on Rp200m

14.3

Rp million to put one more
cart on the street, with its
tracker and stock

5.8

Rp million of EBITDA a
month from that cart at 70
cups a day

2.5

months for the added cart to
pay back its cost

Plan model, August 2026. Growth is limited by good pavements and by how fast carts can be built and staffed.

Rp200m funds ten carts, one kitchen and the launch

In Rp million. Fixed assets, in black, take Rp140.65m. Launch costs, working capital and contingency, in brown, take Rp59.35m.

Five risks are being tested first

Risk	What it means	How it is handled
Site quality	Sites will differ more than the model assumes	Each site is reviewed on a schedule and weak ones are replaced
Site tenure	A kerbside spot is used at the discretion of others	Carts are mobile and each route has backup sites
Trading days	Rain and holidays cut selling days	The model is re-based on days actually traded
Kitchen	One kitchen supplies every cart	Planned for 1,200 cups a day, with a second kitchen in the growth plan
Sellers	A weak site and a weak seller look alike in the numbers	Sales are logged by seller as well as by site

Four people run kitchen, fleet and sites

Faldo

Founder

Owns the plan, the model and the site decisions.

Background in equity research and growth strategy.

Jason

Chief operating officer

Runs operations and the fleet-tracking system.

Louis

Field scouting

Scouts sites and competitors on the ground.

Andrew

Operations lead, launch month

Runs the kitchen and the carts day to day.

The initial round is Rp200m for 20% of the equity

200

Rp million sought in the initial round

150

Rp million committed to date

50

Rp million still open

20%

of the equity, at 1% for every Rp10 million

Rp1bn

Implied value of the whole company at 1% per Rp10 million.

Rp100m

First dividends go to investors until they have recovered half of their capital.

Month 2

When the Rp100m is paid in the plan model at 70 cups a day. Month 3 at 50 cups.
