

Amphenol Corporation APH

GoTrade Equity Research — Investment Committee Note

Margin durability, not catalysts: the in-window catalyst book is 1.82% of base NTM revenue — below the materiality gate — so what carries value is the adjusted operating margin near 29.1% and the 27.5x forward multiple. Recomputed under the engine's anchor-identity guard, the one-year roll the prior bank's construction dropped is worth +\$24.77 per share, and the edge flips positive.

ENTRANT Weak Buy T48 positive-carry floor, confirmatory path — edge +5.5% primary and +6.5% fallback, positive on both routes; inside the T28 none bucket, paid on drift		HOLDER Hold undiscounted basis — return +17.0%; the model expects an absolute gain, and priced-for-perfection is a hold, not a trim	
SPOT \$161.34 close prior day	WEIGHTED PV \$170.15 not a target price	UNDISCOUNTED \$188.68 holder basis	BEAR-BULL SPREAD \$71.56 42.1% of PV

NTM ADJ EPS (BUILD)	FORWARD P/E	MOAT (PACK-ONLY)	WEIGHTS BEAR/BASE/BULL
5.93	27.5x	3.25/5.00	15/30/55

What carries value	adjusted operating-margin durability near 29% and the 27.5x forward multiple; in-window catalyst revenue is 1.8% of base NTM (materiality spirit fired)
What the model finds	no variant view — confirmatory model; Z sits with both X and Y inside noise
Why it moved vs the prior bank	the v4.3 bank's Trim rested on a -7.0% edge produced by the roll-less exit construction T47 now invalidates; recomputed with the roll, the same inputs land Hold
What ends it	the true-driver switch: adjusted operating margin <28.0% in either of the next two prints, or NTM EPS support below \$5.60

RUN INTEGRITY
run_status
full; FY2027 consensus retrieved this session; the FY2027 estimate-revision series remains missing
risk_budget
0.50% of NAV stored user-stated; position cap not computed in reduced form

I

No variant

The engine's twin reconcile puts priced, consensus and build on one line — and they agree.

Priced X	\$5.87 NTM EPS = spot / 27.5x published forward P/E
Consensus Y	\$5.94 sliced NTM EPS
Build Z	\$5.93
Z – X	+1.1%
Z – Y	-0.2%
Engine's declaration	no variant view — confirmatory model; Z sits with both X and Y inside noise
Observing event	Q3'26 print, estimated 2026-10-28 M

COMPARATOR QUALITY

fy2027_revenue_consensus

\$41,665M D-web (MarketScreener and Simply Wall St agree; 16 analysts)

slice_validation

spot / sliced NTM EPS = 27.1x vs 27.5x published forward P/E — reproduces within 0.4x; slice and FY27 comparator stand

revision_vector

price targets rising (\$182 on 2026-05-05 to \$192.12 average on 2026-08-27 D-web); FY2027 EPS revision series missing — vector is target-based, low quality

NOT A CATALYST THESIS

SPIRIT FIRED — full size clears 2%, in-window does not; not a catalyst thesis; the value carriers are adjusted operating margin and the exit multiple

The repair that makes this section possible is the FY2027 consensus, retrieved this session from two agreeing sources and validated the mechanical way: spot divided by the sliced NTM consensus reproduces the published forward multiple at 27.1x against 27.5x. The build then lands -0.2% from consensus and +1.1% from the priced anchor — a model that confirms the market rather than disputing it.

The one thing the price does still assert is duration. Inverting the forward multiple on the industrials hurdle surface implies 20.8% perpetual growth against the 15.5% consensus-CAGR proxy — a -5.3pp gap. That is a perpetuity statement, not a one-year mispricing, and it is conditional on the hurdle table itself. The weakest sentence in this section is the FY2027 EPS basis: two sources agree on revenue, but the EPS comparator carries a flagged cross-source ambiguity.

conditionality_label

implied-growth figures are conditional on the industrials hurdle surface; they are not independent evidence for or against the CAPM discount rate

horizon_label

the -5.3pp is a perpetuity statement; the one-year build edge below is a one-year statement; they are not in contradiction

t12_guide_proximity

n/a — Amphenol guides quarterly only; no FY guide to proximity-test

II

The build

Guide-solved margin, catalysts layered above the guide, cash rolled through shares and net debt.

The claim: next-twelve-month adjusted EPS of 5.93 on revenue of 39,013.7. The evidence: the third quarter is not modeled but solved — the base margin of 29.0% is backed out of the company's own 1.40–1.42 guide at the disclosed 27.0% adjusted tax rate, and later quarters add only ten basis points to it. Catalysts enter above the guide, probability-weighted, and contribute 0.59% of third-quarter revenue.

The falsifier is the anchor itself: a third-quarter revenue print more than five percent below the build, or adjusted EPS more than eight percent below it, fires kill switch one and suspends the thesis pending a full rebuild.

q1_anchor_gate
pass
q1_anchor_eps
\$1.42, +5.2% QoQ vs \$1.35 adjusted actual, at the top of the \$1.40–1.42 guide
eps_vs_fcf
FCF \$7,407.9M is \$247.3M below adjusted NI, 96.8% conversion; capex, catalyst NWC and modeled other cash explain the gap; SBC is not the driver
owner_earnings
\$7,248.7M = FCF less \$159.2M NTM SBC M (6M actual \$79.6M D annualised); \$5.62/share; SBC-adjusted FCF yield 3.6%

EXHIBIT 1 THE NTM BUILD — BASE PLUS PROBABILITY-WEIGHTED CATALYST INCREMENT, EPS ABOVE

Bars: quarterly revenue, \$M. Line: adjusted diluted EPS per quarter.

Source: bank S4, engine v4.8-prose. Q3 base is the guide midpoint; catalysts are the modeled beat above guide.

BUYBACK HEADROOM IS AN ASSUMPTION, NOT A DISCLOSURE

program is \$2.0B over three years from 2024-04-23 D; disclosed spend FY2024 \$689.3M D (partly under the prior program), FY2025 \$665.2M D, H1'26 \$386.0M D; remaining availability bounded between ~\$260M and ~\$949M M — modeled \$832M plus program expiry April 2027 requires an ASSUMED re-authorization A, flagged, switch added at 10f

THE ROLL — WHERE THE CASH GOES

Net debt change over the window	-\$5,347.9M
Net share effect	-2.75M, -0.2%, after +2.4M SBC A and -5.15M repurchased M
Cash returned	buyback 11.2%; dividend_to_fcf 16.6%; total cash return 27.8% of FCF
Repurchase price check	spot is +17.0% above the H1'26 average repurchase price of \$137.86 D-derived; below the 20% T10 trigger, not fired
Convert consistency	no convert; diluted weighted 1,291.2M is the EPS denominator throughout, 1,233.0M outstanding is the bridge denominator; neither mixed into the other; net debt carries all debt at face

III

What the price already requires

Three inversions of the base arm, each with what was held fixed.

Breakeven exit multiple	26.3x — -4.2% vs 27.5x
Breakeven NTM EPS	\$5.68 — -4.2% vs \$5.93
Breakeven revenue growth	29.2% vs TTM against 34.5% vs TTM modeled — -5.2pp
Held fixed	guide-solved margin path, rolled share path, 13.6% g_roll, \$1.37 post-window add, 10.89% discount rate

T38 FIRED ON THE MULTIPLE AND THE EPS BREAKEVENS

T38 FIRED — inside the ±10% T23 shock on the same dial

T38 FIRED — inside the margin dial's ±10% EPS effect; the margin dial is also tornado rank 1, so the PV edge is not separable from model error on that input

What this means: spot sits a routine model perturbation below the base arm. The multiple and EPS breakevens are inside the ten-percent shock the tornado applies to those same dials, so the positive edge, while real under the stated assumptions, is not separable from model error on the margin input. Only the growth breakeven clears its noise gate — the price does not require growth the build considers unlikely.

IV

Valuation anchors and the exit

One matched route, three excluded ones, and a bracket set by a partial moat.

ROUTE A — METHOD VALUES AT MATCHED HORIZON

METHOD	MULTIPLE	HORIZON	NTM METRIC	EQUITY/SHARE
Adjusted P/E (primary)	27.5x	matched forward	\$5.93 EPS	\$163.17
EV/EBITDA	22.4x	horizon-unmatched — trailing excluded	\$13,309M	growth bridge +40.7%
EV/Sales	7.3x	trailing horizon-unmatched — excluded	\$39,014M	growth bridge +34.5%
EV/FCF	45.0x	horizon-unmatched — trailing excluded	\$7,408M	growth bridge +57.3%

ev_equity_bridge

\$212,320M EV - \$13,392.2M net debt = \$198,927.8M vs \$198,930M published market cap (gap \$2.2M); / 1,233.0M outstanding = \$161.34 = spot

tree_path

profitable, leverage not distorted, capex Low, D&A not distorted — P/E primary

ntm_fcf_yield_at_spot

3.7% at spot

CROSS-CHECK UNAVAILABLE AT MATCHED HORIZON

unavailable at matched horizon — only the P/E route carries a published forward multiple; a trailing multiple applied to the NTM build of a +34% grower reproduces spot x growth by identity, so the prior-run band fail was a horizon artifact, not signal

PEER READ (M6, RETRIEVED THIS SESSION)

TEL	16.4x forward
LFUS	21.9x forward
ST / APTV	10.9x / 7.6x — tax-distorted, unscored caveat
Read	rich — 2.0x the retrieved peer median of 13.7x; the premium is the growth-durability bet the 6b inversion prices

EXIT STANCE — MOAT X REGIME

Moat score	3.25/5.00 across six relevant drivers; network/ecosystem N/A excluded
Financial gate	PARTIAL — margins and FCF support the read; ROIC vs peers, retention, and market share undisclosed
Direction / confidence	Stable / Low
Bracket	26.5x (current forward P/E less one turn) to 28.5x (current plus one turn)
Regime	unavailable — bracket top stands regime-unvalidated; no re-rating credited in base
Stance	hold to mild compression

exit_stance_rule
 PARTIAL gate binds to row 2 despite score above 3.1

 t18_redeployment_probe
 not fired; buyback:capex 832:1,561 = 0.5:1

The weakest driver is brand and trust at 2.5 of five: mission-critical qualification is inferred from positioning, never from a disclosed premium or retention figure. That single undisclosed layer is what holds the gate at PARTIAL, binds the stance to the mild-compression row despite a score above the strong-moat threshold, and leaves the bracket top unvalidated by any sector series.

V

The catalyst ledger — sized but immaterial

Demoted by the engine's own gate: the catalysts are the clock, not the value.

TWO CATALYSTS, ANCHORED AND SIZED

CATALYST	DRIVER MATH	IN-WINDOW	KEY RISK
C1 CommScope/CCS execution	\$4,600M 2026 CCS sales D x 7.5% upside A (corridor 5–10%, T43 midpoint) = \$345.0M full size	70.0% = \$241.5M	Upside beyond the already-raised \$0.30 accretion guide fails to materialise
C2 IT-datacom organic AI beat	43% of Q2 sales D = \$3,765.9M G IT-datacom; NTM base path \$17,848.3M M; x 55% organic share x 7.5% sustained beat A = \$736.2M full size	62.5% = \$460.2M	AI interconnect growth normalises after +63% organic Q2 and the guided Q3 step-up

c1_accretion_cross_check
 \$0.30 disclosed accretion x 1,291M shares = ~\$387M after-tax already in guide/base; C1 modeled after-tax at full size is \$75.6M — an increment above the guide, not a restatement

 double_count_company_check
 Q3 base \$9,350.0M G + \$55.8M expected catalysts = \$9,405.8M, +0.6% over guide midpoint and 0.06% above the \$9,300–9,400M guide top — the catalyst layer is, by construction, the modeled beat above guide

PROBABILITIES AND CORRELATION

C1 hit probability	75%, priced — expected in-window \$181.1M
C2 hit probability	65%, partial — expected in-window \$299.1M
Shared driver	AI-driven Communications demand, capacity and mix, common quarterly disclosure
Correlation handling	+5pp to both bull and bear weights (T4)

EXHIBIT 2 THE CLOCK — DATED WINDOWS ACROSS THE NTM HORIZON

VI

The distribution

Three arms, correlation-shifted weights, and both lenses on the result.

EXHIBIT 3 SCENARIO ARMS AGAINST SPOT, PROBABILITY-WEIGHTED

Source: bank S9/S10. The weighted PV is a probability-weighted expectation under stated assumptions, not a target price.

WHAT THE EXHIBIT DOES NOT SHOW — PER-ARM CONSTRUCTION

ARM	NTM EPS	G_ROLL	ROUTE A @27.5X	EXIT	ROUTE B	POST-WINDOW
Bear	\$5.27	9.6%	\$158.97	22.0x	\$127.17	\$0.00
Base	\$5.93	13.6%	\$185.36	27.5x	\$186.73	\$1.37
Bull	\$6.26	14.6%	\$197.25	28.5x	\$206.53	\$2.11

bear_resource

materiality fired, so the bear is re-sourced from the true carriers — margin, base growth and multiple compression — as stated deviations, not catalyst-miss alone

weight_derivation

raw bull $0.75 \times 0.65 = 48.75\%$, raw bear $0.25 \times 0.35 = 8.75\%$, base residual; +5pp to each tail (correlation); rounded to 5% — 15/30/55

correlation_declaration

+5pp to each tail; shared driver is AI-driven Communications demand and mix

WEIGHTS VERSUS VALUES

weights are catalyst-derived but scenario values are margin/multiple-derived; the probability structure carries less catalyst information than it appears

Weighted PV / edge	\$170.15 — +\$8.81 / +5.5%
Undiscounted / return	\$188.68 — +17.0%
Identity check	$188.68 / 1.1089 = 170.15$, exact
Discount rate	$10.89\% = 4.64\% \text{ RFR D-web} + 1.25 \text{ beta D-web} \times 5.0\% \text{ ERP A}$
Route divergence	fired — 1.06pp > 0.5pp; primary used, both PVs stated; alternate PV \$171.79 at 9.83% fallback; edge +6.5%; route delta \$1.64

VII

What the answer hinges on

Margin and multiple carry the variance; the catalyst dials are decoration.

EXHIBIT 4 SENSITIVITY DIALS, RANKED BY WEIGHTED-PV SWING

Source: bank S11. Each dial's provenance letter precedes its name; the buyback dial fell to the T24 floor.

dial_1_to_top_catalyst_p_ratio

$7.7x = 17.81/2.32$

t25_multiple_thesis_probe

clear on the ~10x threshold, but margin and multiple jointly carry 20.5% of PV against 2.5% for both catalyst probabilities — the true-driver labeling in S1 stands

t24_drops

buyback dollars, \$0.03 swing, below the \$0.05 floor

linked_dials_t42

catalyst revenue and catalyst EBIT are linked through incremental margin — shocked jointly; p dials shock build and scenario weights together, never independently

EXHIBIT 5 FROM SPOT TO WEIGHTED PV — WHERE THE EDGE COMES FROM

Source: bank S12. Legs sum exactly.

VIII

Execution — reduced form

No variant view exists, so the engine computed no setup, no entry, no hedge, no theta.

Setup	none — confirmatory path; 10h requires a variant view
Menu	10i suppressed — no variant view; no entry, no hedge leg, no exit menu
Event structure	skipped — no setup gate open and no IV/term/skew surface supplied
Thesis theta	not run — no variant edge to decay
Conviction	n/a — 10e requires a variant view
Sizing	0.50% of NAV stored user-stated; position cap not computed in reduced form

t47_anchor_identity_guard

pass — base exit value \$186.73 differs from NTM x current multiple \$163.17; the roll is present, the prior v4.3 construction (exit = NTM EPS x current multiple) is exactly what this guard invalidates

eps_growth_decomposition

NTM adjusted NI \$7,655M vs TTM GAAP NI \$5,140M (+48.9%, bases labeled — TTM GAAP carries Q1 CCS one-times); rolled share change -0.2% — net income growth does effectively all the EPS work, the buyback none

bridge_read

the positive edge is the roll of a ~29%-margin build one year forward at a held multiple, net of the 10.89% one-year cost of equity; it is a margin-durability claim, not a catalyst claim

IX

Falsification

Seven switches, two added by the materiality fire; what fires, when, and what it costs.

KILL SWITCHES			
SWITCH	TEST	CLOCK	STATUS
1 Q1 actual miss	Q3 revenue below \$8,935M (>5% vs build) or adjusted EPS below \$1.31 (>8%)	Q3 print ~2026-10-28	armed
2 Catalyst slip	CCS/IT-datacom evidence pushed beyond Q2'27	Every print	armed
3 Revision reversal	FY2027 consensus falls for two consecutive marks	Baseline set this session: \$41,665M / \$6.455 (2026-08-27)	armed at baseline
4 Moat gate downgrade	Ex-tariff GM <37%, adjusted operating margin <27.0%, or book-to-bill <1.0 without transient explanation	Quarterly	armed
5 Regime breach	Sector multiple below the 26.5x compression bracket	Continuous	INOPERABLE — sector multiple series missing
6 True-driver switch (added)	Adjusted operating margin <28.0% in either of the next two prints, or NTM EPS support below \$5.60	Q3/Q4 prints	armed
7 Buyback path (added)	Next 10-Q remaining authorization cannot fund the remaining ~\$624M modeled spend, or no re-authorization by the April 2027 program expiry	10-Q ~late Oct 2026	armed

kill_switch_fired_now

none

reentry_rule_if_fired

full Steps 2–6 rebuild with the disconfirming data; the fired switch's cause explained inside the new build; fresh run must independently land a sizeable setup; first re-entry conviction capped at mid

APPENDIX A

Completion manifest

Every gate, its status, and the arithmetic that produced it.

GATE	STATUS	FIGURES
Double-count	pass	Q3 base 9,350 + 55.8 = 9,405.8 vs 9,300–9,400 guide, 0.06% above top, stated as the modeled beat; C2 Q3 = 0.8% of quarterly IT-datacom
Materiality dual-read	spirit fired	full 1,081.2/38,533.5 = 2.81%; in-window 701.7/38,533.5 = 1.82% vs 2.0%
Materiality handling	complete	true driver led in S1/S13; bear re-sourced; weights-vs-values caveat; margin switch added
Terminal load	clear	701.7/1,081.2 = 64.9% > 50%
Anchor rule	anchored	C1: \$4.6B CCS sales D; C2: 43%-of-sales D x just-under-half split D-call x guided sequential G
Q1 anchor	pass	9,405.8 (+7.4% QoQ, +51.9% YoY); EPS 1.42 in guide; catalysts 55.8
EPS vs FCF	stated	FCF 7,407.9 vs NI 7,655.2; -247.3, 96.8% conversion; owner earnings 7,248.7
Buyback reality	flag	modeled 832 vs bounded headroom 260–949; assumed re-authorization A; 11.2% of FCF; T10 +17.0% not fired
Horizon match	applied	FY26 slice +0.2%/-0.4%; NTM vs sliced consensus -0.1%/-0.2%
T12 guide proximity	n/a	no FY guide exists
EV/equity bridge	pass	212,320 - 13,392.2 = 198,927.8 vs 198,930; /1,233.0 = 161.34
Cross-check band	unavailable at matched horizon	one matched route (fwd P/E); three trailing routes excluded with growth bridges 40.7/34.5/57.3%
Divergences	none computable	horizon exclusions stated
Moat source	pack-only	3.25, PARTIAL, Stable, Low confidence; network N/A
DR arithmetic	shown, T20 fired	CAPM 10.89% vs fallback 9.83%; gap 1.06pp; PV delta \$1.64
Correlation	applied	+5pp each tail; AI Communications demand
Unmodeled tail	n/a	implied read above bracketed bear
Tornado pre-screen	none	no dial multiplies zero
Breakeven noise T38	fired on multiple and EPS	-4.2% distances inside ±10%; growth -5.2pp clear vs 3.3pp
Discrimination	n/a	reduced form
Asymmetry construction	n/a	reduced form; fields explicitly n/a
Conviction caps	n/a	reduced form
10f completeness	extended	margin switch and buyback-headroom switch added
Inoperable switches	one	sector multiple series (switch 5); switch 3 armed at baseline
Menu gate	suppressed	confirmatory; no S, beta, entry or exit leaked
Growth basis T39	pass	15.5% FY26–FY28 consensus revenue CAGR; one-year step-up rejected
DR category/sanity T40	pass	CAPM 10.89% inside 7.5–20%; hurdle table used only for 6b inversion
Route-shock T41	one	DR route pair, \$1.64 delta
Linked dials T42	applied	catalyst revenue-EBIT identity; p-weights coupling
Anchor identity T47	pass	exit 186.73 vs present-value identity 163.17; roll present

GATE	STATUS	FIGURES
Convert consistency	pass	no convert; 1,291.2M EPS denominator, 1,233.0M bridge denominator, both stated
Tax basis T45	n/a	adjusted ETR 27.0%
Fade bind T46	n/a	no terminal-load election
Tail symmetry T44	n/a	no mandated tail
Recomputation	confirmed	S1–S13 computed from the 2026-08-27 retrieved pack; no v4.3 figure carried forward

APPENDIX B

Provenance

Who says so: disclosed, guide-derived, modeled, assumed.

EXHIBIT 6 TAG CENSUS AND THE MODELED-OR-ASSUMED SHARE OF WEIGHTED PV

Source: bank SP.

Fired defaults (A-cell register)

- C1 7.5% upside corridor midpoint; C2 7.5% beat corridor midpoint; sequential base growth beyond Q3; other cash 1.5% of revenue; catalyst capex/dNWC rates; 0.6M/qtr SBC shares; ERP 5.0%; H1'27 consensus slice 48%/47%; assumed buyback re-authorization; \$218M/qtr net non-operating hold

What would repair it, ranked

- Two dated FY2027 consensus revision marks — arms kill switch three fully and repairs the last conviction input.
- Q3'25 adjusted EPS and four to eight quarters of adjusted history — removes the GAAP/adjusted mixing in the bridge decomposition.
- A sector forward-multiple series — validates the bracket top and arms switch five.
- The 10-Q equity note's exact remaining repurchase authorization — replaces the bounded headroom estimate and resolves switch seven.
- Disclosed IT-datacom revenue dollars — replaces the derived base and lowers the provenance ratio.
- IV, term and skew — only if a future run lands a dated-event setup.

conviction_cells

n/a — 10e not run (no variant); revision-vector input remains MISSING INPUT (FY27 estimate series); T35 credits none; pack-limited not applicable

t37_check

dial 1 is base adjusted operating margin, provenance M; cap not bound

threshold_overrides

T48 added, user-promoted (Faldo) 2026-08-28 — confirmatory-path entrant floor Weak Buy when edge_to_weighted_pv is positive on both DR routes; applied this run (+5.5% primary / +6.5% fallback)

DISCLOSURES

[[DISCLAIMER]]
